REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: Claims 1-42 are considered allowable since when reading the claims in light of the specification, none of the reference of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims. The prior art of record (US Patent # 5,920,566) relates an integrated circuit comprising a router with third subsystem having a forwarding memory and being coupled to the first and second subsystems via first and second internal links. The network element is configured to implement packet routing functions in a distributed manner. The prior art of record (US Patent # 6,677,786) relates to integrated circuit comprising an on chip bus 104 with a first subsystem, second subsystem and a third subsystem coupled to the on-chip bus 104 as shown in fig. 1. As to claims 1-12, the prior art of record does not teach a third multiplexor coupled to the first second and third subsystems to select and output for the first subsystem one of the second output of the second subsystem and the third output of the third subsystem and a controller coupled to the first, second, and third subsystems and the first, second and third multiplexors to allocate and control operation

of said first, second and third multiplexors to facilitate concurrent communications between selected combinations of the first, second and third subsystems.

As to claims 13-20, the prior art of record does not teach configuring the corresponding selected one of the first and second multiplexors to provide a path for the first output of the first subsystem to reach the destined one of the second and third subsystems, if the corresponding selected one of the first and second multiplexors is available to be so configured. As to claims 21-33, the prior art of record does not teach concurrently configuring the corresponding selected one of the third and first multiplexors to provide a path for the third output of the third subsystem to reach the destined one of the first and second subsystems, if the corresponding selected one of the third and first multiplexors is available to be so configured. As to claims 34-42, the prior art of record does not teach the second subsystem outputting a second output for a selected of the first and third subsystem; the third subsystem outputting a third output for a selected of the first and second subsystems; and a data traffic router selectively configuring itself to provide paths for all or a subset of the first, second and third outputs to concurrently reach the output' destinations. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
